# WHAT IS STRUCTURED CABLING?

Structured cabling provides signal transmission solutions for virtually every area of the enterprise - from the building entrance to the rooftop, to the data center, to boardrooms, auditoriums and conference rooms, to building management and security system control rooms, and to each individual office or workstation.

WHY STRUCTURED CABLING?

LESS DOWNTIME

ORGANIZED & TIME SAVING

AESTHETICS

CONTRACTOR INDEPENDENCE

SAFETY

FUTURE PROOFING

OUR ROLE

Our involvement in a project often commences during the early stages, where we offer technical support and design assistance to ensure appropriate specification in all elements, from correct Category cables to correct grade of fibre, to the most suitable environment and the correct sheathing material to manufacture etc. There is a lot more to cabling system performance than just buying good quality cable and connecting hardware. In order to ensure full bandwidth potential, a structured cabling system needs to be properly designed, installed, and administered.

WHAT IS CCTV?

CCTV, or closed-circuit television, is a system that allows you to keep an eye on what's going on in and around your business. Cameras and monitors enable you to view events live, and recorders archive footage for later reference.In order to ensure full bandwidth potential, a structured cabling system needs to be properly designed, installed, and administered.

TYPES OF SECURITY CAMERAS WE PROVIDE

01
WIRED SECURITY CAMERA

There use cables to transmit footage and conduct video surveillance, but the signal can weaken when the transmission range exceeds 300 meters. Several cameras can be interconnected to a single monitor located in a security room.

02
ANALOG CAMERA

These have been around for years and are still the most common type of CCTV camera installed today. They have basic functionality and store video onsite.

03
IP (INTERNET PROTOCOL) CAMERA

These have same functions as their analog counterparts, but with greater capabilities. IP cameras boast sharper, higher resolution images and more flexible features like remote zoom and repositioning, option to view footage on a web browser.

WHAT IS ACCESS CONTROL?

Access control systems provide security by allowing or denying a person's admittance to an area or facility through the use of access cards or biometric recognition.

With an appropriate residential or commercial security system in place, your organization control an individual's entry, record the time, date, and location where the employee or guest entered and exited. In order to do this, you need a professionally designed and installed system that is properly maintained at all times.

ACCESS CONTROL INSPECTION & MAINTENANCE

As a qualified provider of access control system inspections and repairs, MAMICNI recognizes that regular maintenance of your system is essential for continued unhindered smooth performace at competitive prices.

WHAT ARE PA/VA SYSTEMS?
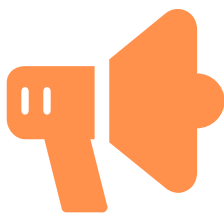

PAVA systems are installed within buildings where there is a need to provide clear concise spoken messages either for general day to day messages or in the event of an emergency to safely evacuate occupants. In an emergency situation such as a fire, it is essential that people are evacuated safely and in the shortest possible time.

At MAMICNI we supply and install PA/ VA systems for various organisations.

WHAT ARE A/V SYSTEMS?

A/V systems can be comprised of an assortment of hardware that includes conference telephones, video cameras, interactive whiteboards, digital signage, computers, smartphones, tablets, wireless connectivity, and more.

A/V SOLUTIONS WE PROVIDE;

CONFERENCE
SYSTEMS

CAMERA
SYSTEMS

VISUAL DISPLAY

AV CONTROL
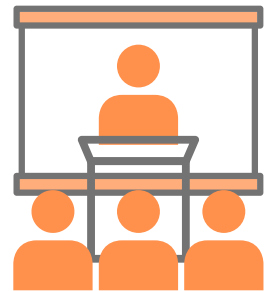

AV INFRASTRUCTURE
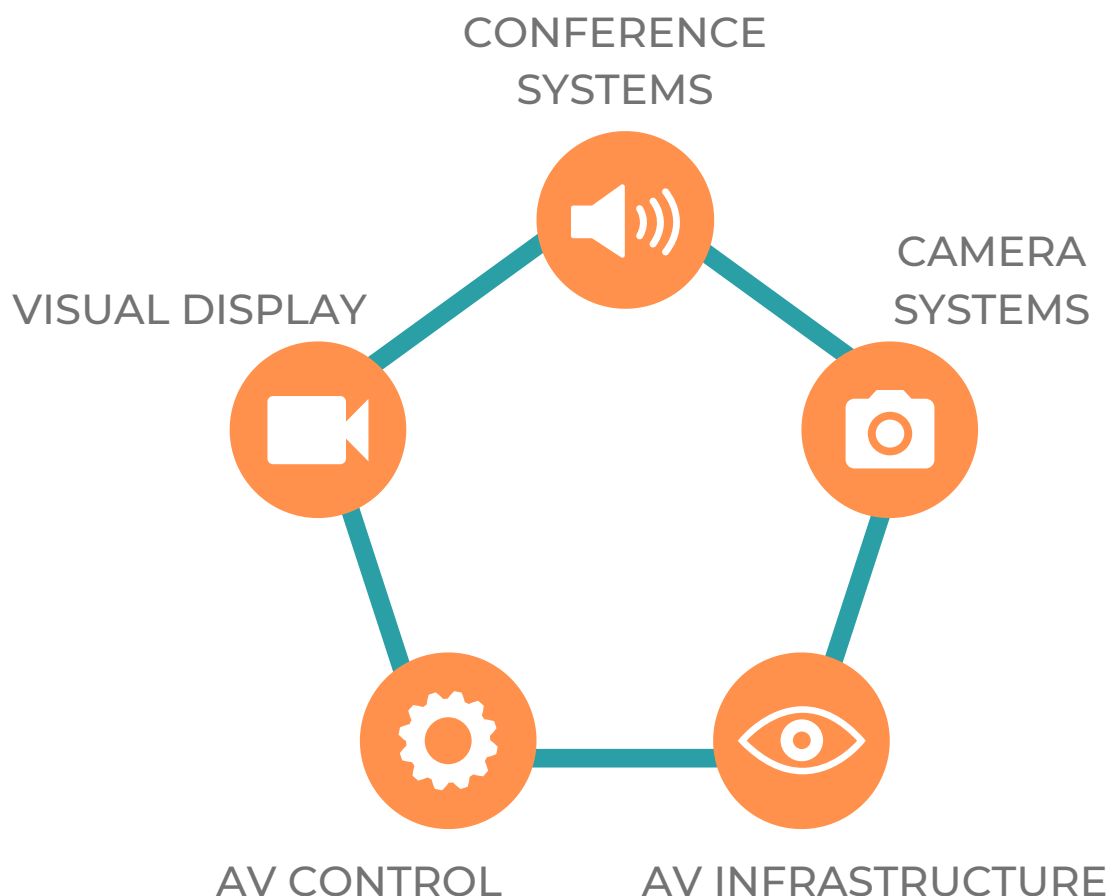

WHAT ARE TELEPHONE SYSTEMS?

A phone system comprises multiple telephones used in an interconnected fashion that allows for advanced telephony features such as call handling and transferring, conference calling, call metering and accounting, private and shared voice message boxes, and so on. A telephone system can range from just a few telephones in a home or small business up to a complex PBAX system used by mid-sized and large businesses.

At MAMICNI we cater to the supply different brands of digital telephone systems, telecom products, PABX systems and VOIP system.
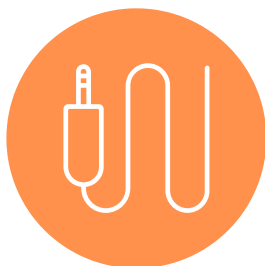

WHAT ARE INTERCOM SYSTEMS?

An intercom, talkback or doorphone is a stand-alone voice communications system for use within a building or small collection of buildings, functioning independently of the public telephone network.

AT MAMICNI OUR SOLUTIONS INCLUDE;
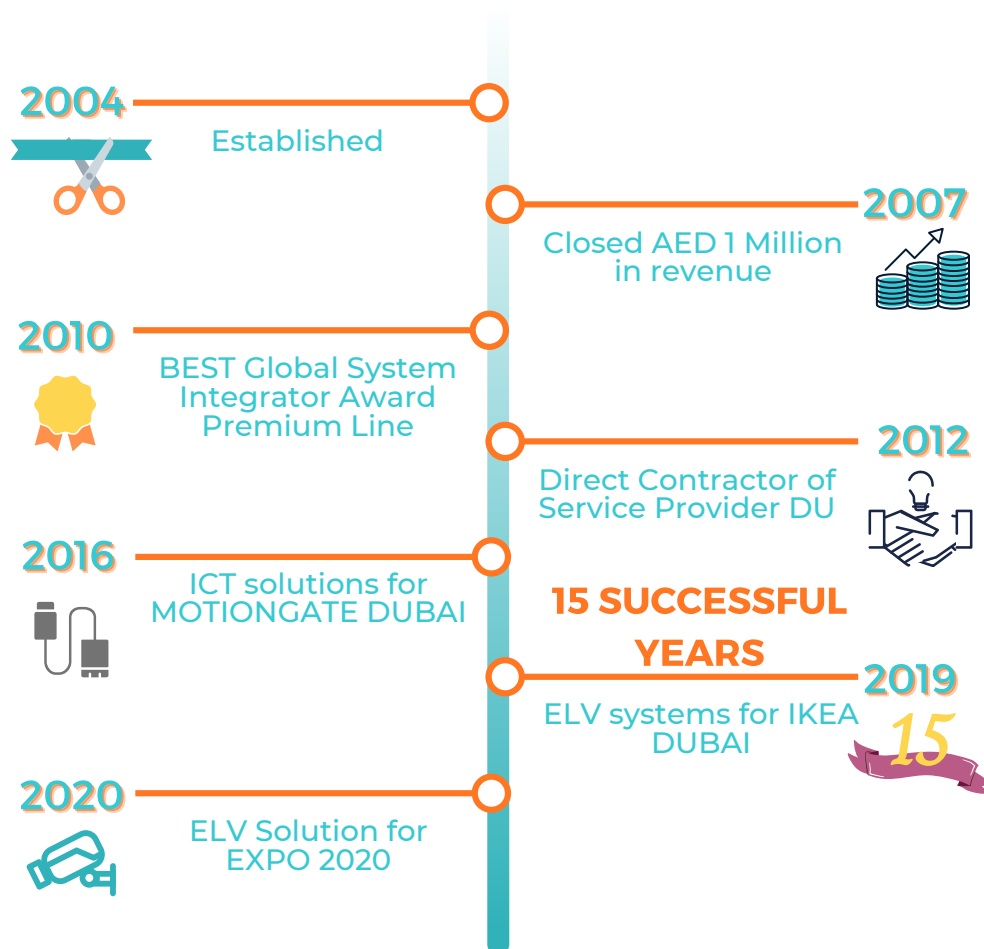

WIRELESS INTERCOM

WIRED INTERCOM

VIDEO INTERCOM

APARTMENT INTERCOM
